

**TRIMBLE ALLTRAK
TAKE CONTROL OF YOUR ASSETS**

IMPROVE ASSET PRODUCTIVITY

TRIMBLE ALLTRAK ASSET MANAGEMENT SOLUTION

Trimble® AllTrak™ is a complete solution that refines the complex processes of managing detailed information about assets, giving contractors real information – not guesses – about:

- Acquisition and costs
- Distribution and utilization
- Service / maintenance schedules and costs
- Retirement and ROI

Trimble AllTrak records and presents detailed information about the assets in an easy-to-understand way. The AllTrak system follows the natural workflow of a construction business, so asset tracking is easy and intuitive.

CONSUMABLE MANAGEMENT

Monitor consumable inventories with high and low quantity alerts, re-order information, project billing, powerful lookup capabilities, and versatile reporting.

RENTED INVENTORY

Track rental tools and equipment, prorate their costs, set up visual and email alerts for return dates and track total rental cost vs. asset value ratios.

MULTIPLE LOCATIONS

Manage the inventories of multiple branch locations or distribution centers. Decision makers can access critical data about their entire enterprise from one centralized database. Powerful security can limit or enhance a user's visibility and functionality to all or part of the database.

WITH TRIMBLE ALLTRAK YOU CAN:

- Centralize and simplify management of equipment and tools
- Improve asset utilization and productivity
- Minimize equipment rental costs
- Reduce loss due to theft or misplacement

GET REAL-TIME DATA TO ANSWER QUESTIONS SUCH AS:

- Are we doing equipment maintenance at the right time?
- Are we investing wisely in equipment?
- Are we effectively invoicing customers for use of equipment?
- Is it time to retire and replace our equipment?

TRIMBLE ALLTRAK SUPPLIES QUANTITATIVE INFORMATION YOU CAN USE TO ANALYZE AND IMPROVE ASSET PRODUCTIVITY.

SERVICE & MAINTENANCE

Never send unusable inventory into the field again. AllTrak can help increase the life of your assets by managing and tracking service schedules along with maintenance intervals. The system tracks all service events, even re-occurring tasks such as inspections, calibrations and certifications along with all related documentation. With visual and email alert notifications, you will know what events are due, when they are completed and what costs are involved. Forecasting service costs is easy and service expenses can be charged to locations.

NETWORKING

Install on a single computer, across a local or wide area network, or use the internet for remote connections. Trimble AllTrak Mobile can communicate with the database via ActiveSync or a wireless connection.

BILLING

Determine utilization; charge tools, equipment, consumables, parts, materials and any other assets to any location. Choose from daily rates, one time charges and rental rates, and adjust them accordingly to fit the type of work or project ... and effectively charge the same asset differently based on location. Additionally, AllTrak can calculate the asset purchase cost, billing charges, service and plug charges to determine its profitability. Trimble AllTrak allows you to identify inventory that is underutilized, at the end of its life cycle, costing money or making money.

MOBILITY

Collect information about tool and equipment assignments and deliver that information back to AllTrak for tracking and analysis. Armed with rugged mobile scanners and the Trimble AllTrak Mobile software, operators can perform all tool transactions like check-in, check-out, transfers and additions from anywhere.

REPORTING

Trimble AllTrak includes more than 20 standard, easily customizable queries that can filter data hundreds of ways. The system can produce thousands of reports giving decision-makers accurate real-time information critical to their daily operations and success.

TRIMBLE NOMAD 800LE

- Rugged handheld device
- Integrated barcode scanner
- Integrated 2 megapixel camera
- Windows Mobile 6
- 806 MHz processor
- 1 GB memory
- 128 MB RAM
- Numeric keypad

Contractors in the U.S. lose more than \$1 billion per year in tools and equipment. Knowing the “who, what, when, where and how much” about your tools and equipment can reduce annual tools cost by more than 40 percent.

The Connected Construction Site.

Trimble Building Construction solutions give contractors more control of their job sites. With products for jobsite management, site prep, concrete layout, MEP layout and asset management, Trimble solutions connect construction processes with information. Wireless data transfer can connect the office and job site so designs are always updated. Layout progress can be monitored and confirmed. Every question can be answered instantly. Every asset managed for profitability. Connecting your site will mean greater control, and significant improvements in construction accuracy and productivity.
