

### KEY FEATURES

Data Transfer Via Email From iPad to Vulcan®

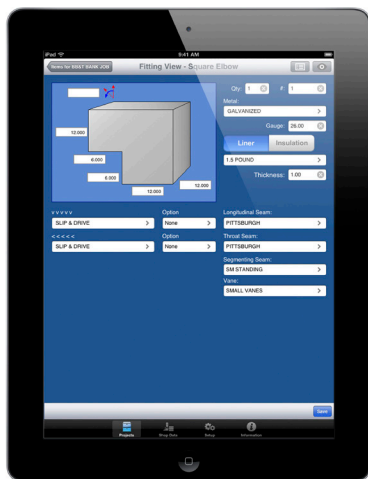

Comprehensive Fitting Libraries

Intuitive Information Input

3rd Party Application Integration

3D Rotational Preview

Standard Company Defaults and Fittings

Is your crew still creating sheet metal fittings in the field on scraps of paper, cardboard and sheetrock? Does the fitting information from the field to the office get lost in translation? Are you wasting valuable production time trying to decipher field notes? Are you looking to eliminate the finger pointing and expedite getting parts back to the field? Discover Trimble Field Fitting Input for iPad, the most efficient and easiest way to enter sheet metal fitting information in the field and transfer it to the office for import into your Vulcan® cutting software.

### BUILT FOR EFFICIENCY ON THE JOBSITE

Trimble Field Fitting Input takes the guesswork out of the information coming from the field. By using Trimble Field Fitting Input, field & shop personnel can reduce or eliminate errors resulting from incorrect dimensions from hand drawings. Contractors don't have to worry about learning a complicated program; Trimble Field Fitting Input features an intuitive input interface---using the iPad's gesture controls for maximum flexibility.

Whether you are looking to do a small residential or large commercial project, Trimble Field Fitting Input covers you with a comprehensive fitting library for most any situation. Additionally, Trimble Field Fitting Input provides your organization with 97% of the Vulcan® CAM software library of fittings.

Trimble Field Fitting Input allows contractors to keep each project separate, and keep floor and drawing information separate within each project. When entering fitting information, contractors aren't limited to just dimensions---they are able to enter every dimension as well as the type of metal, gauge, insulation & liner thickness, and seam data.

While in the field, contractors can check to ensure the fitting being entered is accurate by utilizing a 3D rotational preview. Through the 3D preview, contractors are no longer assuming they have the correct information---they can actually see it, touch it, and rotate it!

### FIELD FITTING SIMPLIFIED: A VULCAN COMPANION

Trimble Field Fitting Input provides contractors the ability to import their company standard defaults and fittings from Vulcan®---making capturing sheet metal fitting information in the field more seamless, accurate and simplified.

Through the Trimble Field Fitting Input app, contractors are able to enter not only dimensions, but scoping information including: Floor, system, and experience the ease of selecting double wall fitting needs with a flick of a switch. With the use of graphical icons combined with dimensional data, contractors are able to quickly see if all fittings have been entered.

### THE ONE AND ONLY APP FOR YOUR SHEET METAL FIELD CREW

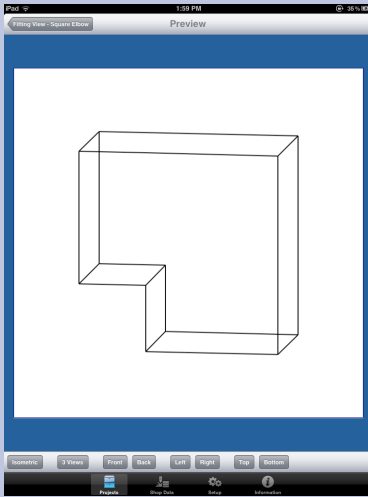

With Trimble Field Fitting Input, the shop no longer has to decipher information from sheets of paper and live by the mantra, "enter once and get it right". The easy to use app provides field crews with the dimensional data as well as notes and instructions for installation crews. Trimble Field Fitting Input speeds the process from field to shop and back, by eliminating double work from mistakes through misinterpretation of data, or confusion on installation.

Trimble Field Fitting Input allows for a simple transfer of information from the field to the shop. It's as easy as 1-2-3 to export the data to a file, email it to the office and import into the Vulcan® CAM software.

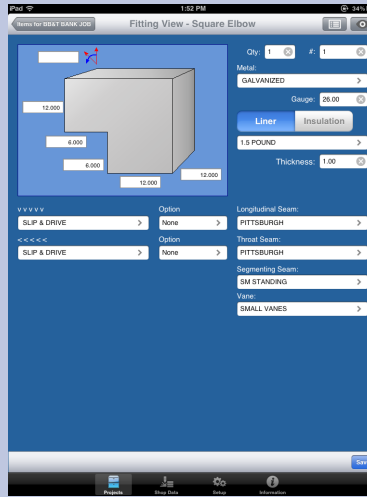

Reduce errors and rework while increasing productivity and return on investment. Get things done right the first time with Trimble Field Fitting Input for iPad.
