

LiveCount Cloud

DIGITAL TAKEOFF SOFTWARE

Most bid requests for MEP contractors are still represented by 2D digital drawings and require one to either print out the drawing set or use an on-screen takeoff tool. Trimble LiveCount™ Cloud speeds up the estimating process and provides contractors with the ability to streamline the quantification process and seamlessly integrate marked-up digital image files with your Trimble MEP estimating software.

ACCURATE CONSTRUCTION TAKEOFF

Trimble LiveCount Cloud combined with Trimble Accubid® Estimating software gives you the complete integrated estimating takeoff software package. LiveCount Cloud features a bi-directional link with Accubid Classic ensuring changes made on your takeoff or in your estimate are always up to date. Takeoff edits can be initiated within LiveCount Cloud and automatically update the audit trail when quantities are changed. With no need to import, export, or manually enter quantities, the estimator is able to move quickly within the project.

TAKE ADVANTAGE OF CLOUD TECHNOLOGY

As a cloud based solution LiveCount Cloud gives you the ability to manage large images and projects quickly. The image processing available within Livecount Cloud is infinitely faster with the ability to use more processing power from across a larger number of secure servers. Additionally, with LiveCount Cloud's ability to handle large sets of drawings and poorly named files, contractors can significantly speed up project creation.

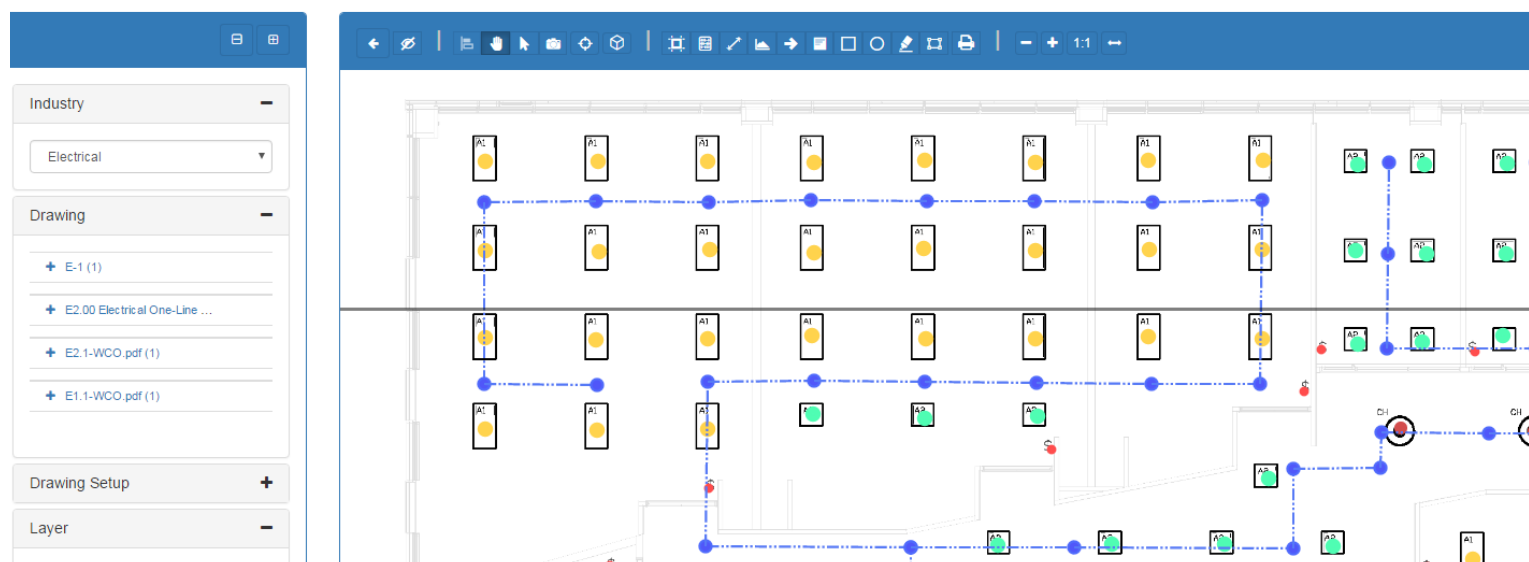

INTUITIVE WORKFLOWS

Whether you have new estimators or guys who have been around the block a few times with LiveCount Cloud there's no need to teach yourself new takeoff methods, LiveCount Cloud features workflows that emulate traditional takeoff methods. LiveCount Cloud measures takeoffs across multiple drawings which means users can see the quantity displays both by page and overall totals. With incredibly fast redraw time, easy-to-use pan and zoom features and close-up windows to help with the big picture and small details.

Benefits

- ▶ Reduce the need for paper plans
- ▶ Achieve accurate and trackable estimates
- ▶ Intuitive workflows for all levels
- ▶ Bi-directional link with your Accubid Classic estimating software

KEY FEATURES

Assembly Takeoff

LiveCount Cloud's unique bi-directional link with Accubid Classic tracks both lengths and counts in the same run. This link saves time and ensures accuracy because every length or count, once linked to your estimating, changes automatically as you move, add or delete measurements.

Drawing Compare

Save time with the Drawing Compare feature and easily see what has been added or taken away since the last revision. After all, changes are always indicated within a cloud on the drawing, right?

Filtering

Take filtering and layering to a new level with dynamic links to all of the breakdowns in your Trimble Accubid Classic Estimating. Layers are automatically created which then allows the estimator or chief estimator to view specific layers or the complete drawing with a simple mouse click.
