

Trimble AllTrak Cloud

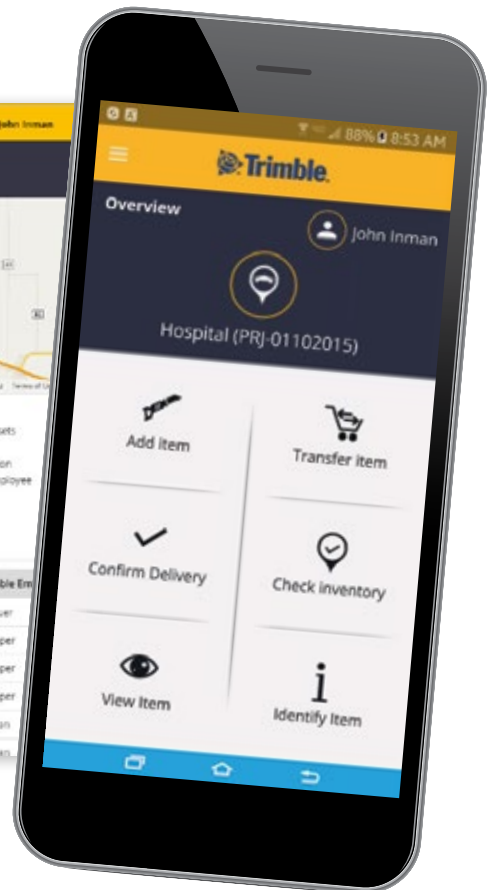

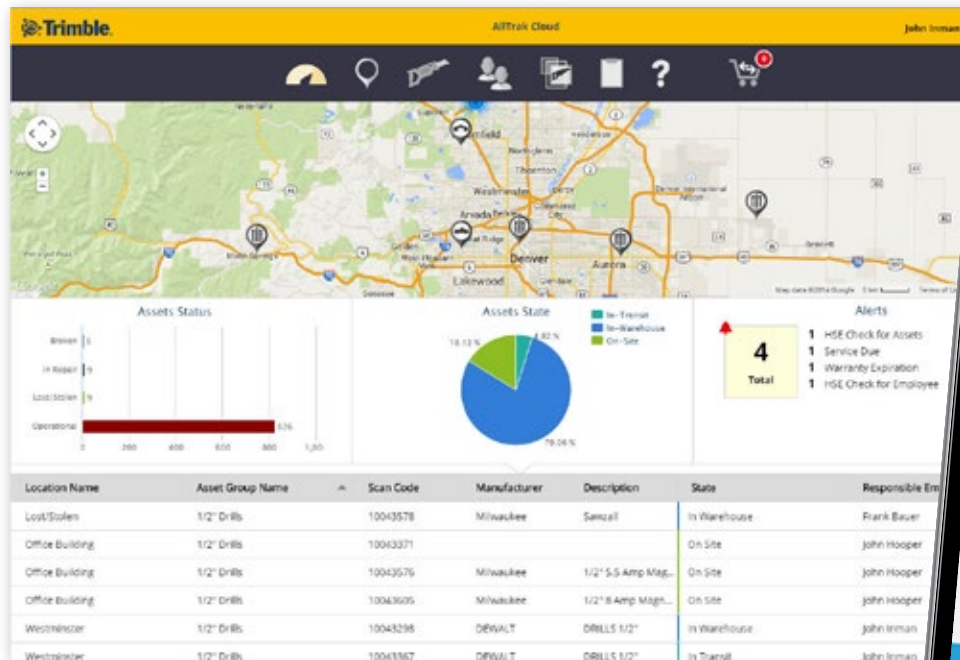

With the typical contractor maintaining thousands of tools and material assets, complete insight into tool location, utilization and serviceability can determine project efficiency and profitability. With Trimble® AllTrak™ Cloud, contractors are able to instantly gain access to asset information that allows for proper jobsite allocation, service scheduling and project utilization.

What is poor asset & tool management costing your business?

Proper management and allocation of tools and assets at jobsites, warehouses, or on service trucks, is a constant challenge for today's contractor. Designed to eliminate inconsistency and optimize material asset management across locations, contractors using Trimble AllTrak Cloud are now able to instantly gain access to asset information that allows for proper jobsite allocation, service scheduling and project utilization. With this information contractors can now have confidence in knowing that jobsites are properly charged for tool usage, the ROI on individual assets, equipment is locked up at the end of the day, and dispatched service vehicles are properly equipped to complete the job.

Key Features:

- ▶ Real time tool and material asset management
- ▶ Access the system from anywhere using your smartphone
- ▶ Customizable reports
- ▶ Role specific dashboards
- ▶ Service scheduling reminders and certification alerts
- ▶ Barcode and RFID technology support

Real Time Tracking

With AllTrak Cloud, contractors now have real time access to all their material asset and tool information. Utilizing the latest cloud technology, users can access tool and material asset information from any web browser or remotely with the mobile application. AllTrak Cloud supports both barcode and RFID technologies, through a mobile scanner, allowing for easy check-in and checkout of equipment.

Eliminate Service and Maintenance Inefficiencies

AllTrak Cloud can help increase the life of your assets by managing and tracking service schedules along with required and preventative maintenance. The system tracks all service events, even re-occurring tasks such as inspections, calibrations and certifications along with all related documentation.

With alert notifications, you know what services and certificates are due, when they are completed and what costs are involved.

Increase Accountability and Productivity

AllTrak Cloud takes the guesswork out of tool utilization and location. Users can easily transfer assets between locations and assign them to the responsible employee. With the simple transfer functionality used in conjunction with the mobile scanner tool hoarding, loss and theft is minimized. Where's my stuff? Stop wasting time chasing down tools at the end of each day, with AllTrak Cloud you have confidence in knowing where your tools are in real time.

Purpose-Built for Construction Layout

- ▶ Take the guess work out of managing assets
- ▶ Cloud based system allows for easy access from your browser or on your smartphone with the mobile application
- ▶ With support for both barcode and RFID technology, checking assets in and out has never been easier — no more wondering “where’s my stuff?”
- ▶ Don’t let theft or misplacement set your business back, AllTrak Cloud gives you complete insight into your assets
- ▶ With the customizable dashboard get a clear picture of what matters most to you and easily drill down for more details.
